JBL Black Box Technology

- The black box system reduces the potential problem of water intrusion in a marine stereo by including a waterproof faceplate as well as a separate box that functions as the "brain" of the unit that can be placed anywhere.
- This box allows the user to put it in an area that is protected from water.
- The black box chassis is a corrosion proof, molded poly chassis.
- Rather than including a CD player as standard equipment with these units, they feature media options so that users can bring along an MP3 player or a variety of other types of portable media such as USB, cell phones and iPods.

JBL Bluetooth Black Box System

- Bluetooth Audio Streaming.
- 4 x 50 watts.
- AM/FM tuner. Aux-in. E-prom.
- 3 pair RCA outputs including subwoofer.
- U.S. and European tuning.
- USB input and control.
- Built in RF remote receiver (transmitter, MILRF9, is purchased separately).
- Implements RS485 communication protocol x 2 ports.

Garmin BlueChart® g2 with High-Res Satellite Imagery

- Navigate like you were born on the Louisiana Bayou. Combining on-screen navigation with the latest in high-resolution satellite imagery, this mapping product - with complete coverage on a single card - offers clear and current information regarding access to those backwaters, swamps and canals where standard government-issue marine charts may not accurately represent the shifting shorelines of navigable waterways.
- Navigate with a true and realistic "bird's eye" view of the channels and shorelines in your area by integrating 1 meter high-res color satellite imagery with your chartplotter's marine cartography.
- Quickly and easily superimpose satellite images over your displayed charts for real-life views of waterways, landmarks, obstructions, terrain features and more. View aerials of shorelines, roads, marinas, canals and channels, which help provide the extra situational awareness you need to clearly see the big picture when you're "up to your armpits in alligators."
- For added perspective, BlueChart g2 cartography offers a choice of standard 2-D direct overhead or 3-D "over-the-bow" map views to further enhance chart interpretation and orientation.

Garmin Panoptix™ PS30 Down Transducer

- With the Panoptix Down transducer, you can actually see fish and bait swimming around under your boat - in real time; even while stationary.
- You get 3 remarkable views:
  - LiveV Down provides real-time moving sonar images. You can see fish swimming toward or away from the boat. You can see small baitfish and large target fish swimming around, even your lure.
  - RealV 3-D Down Allows your boat to be stationary and still see things in 3-D around your boat. It shows history of only 1 sweep.
  - RealV 3-D Historical Used for finding fish while your boat is moving. This shows the entire water column you have passed over in 3-D, from the bottom of the surface and all of the fish in between.

Garmin Panoptix™ PS31 Forward Transducer

- With one Panoptix Forward transducer, you can actually see the bottom, structure and fish swimming around in front of your boat - in real time; even while stationary.
- You get 2 impressive views:
  - LiveV Forward - Updates the entire view with a single ping and has a more "live video" look, providing real-time moving sonar images. You can see fish swimming toward or away from the boat. You can see small baitfish and large target fish swimming around, even your lure as you reel it in.
  - RealV 3-D Forward - Updates a slice of the 3-D volume with each ping and take 1 to 4 seconds to update the entire volume. It shows the bottom and fish in the water column coming toward the boat. It sweeps forward, and the history on screen is only one sweep.

Garmin GT15M-IH Plastic, In-Hull Mid-Band CHIRP Transducer

- GT15M-IH transducer is ideal for boats that want to install the transducer inside a fiberglass hull and not on the transom where cavitation could cause issues.
- It can be used with a hull deadrise angle between 0 and 25 degrees and is excellent for boats traveling at high speeds that want to maintain accurate depth readings.
- The 8-pin transducer with 4 plastic tanks features mid-band CHIRP traditional sonar (85-165 kHz) and has a power rating of 600 W.
- It can be used in conjunction with a GT30-TM transducer and an adapter cable so you can maintain depth at high speeds and scanning capabilities at trolling speeds.

Humminbird SmartStrike Digital GPS Maps

HUMMINBIRD

- SmartStrike is a powerful software program contained on an SD card that allows anglers to utilize LakeMaster map data and extensive search algorithms to pattern and locate fish like never before.
- Based on search parameters like fish species, season, time of day, and weather conditions, SmartStrike highlights areas of the lake map where your prey is most likely to be located - before you even wet a line.
- Build detailed searches by selecting your desired search criteria.
- Or searches can be fast and easy: Simply click on any location on the water, select Find Similar Areas, and millions of data points are searched to return other areas like the one you selected.
- The SmartStrike engine searches depth ranges, aspect, type of structure, proximity to major types of lake structure, and more to quickly reveal your results.
